DATACENTRE
COLOCATION

OvertheWire provides piece of mind through a secure and monitored environment, utilising power redundancy, to keep your business' critical infrastructure online.
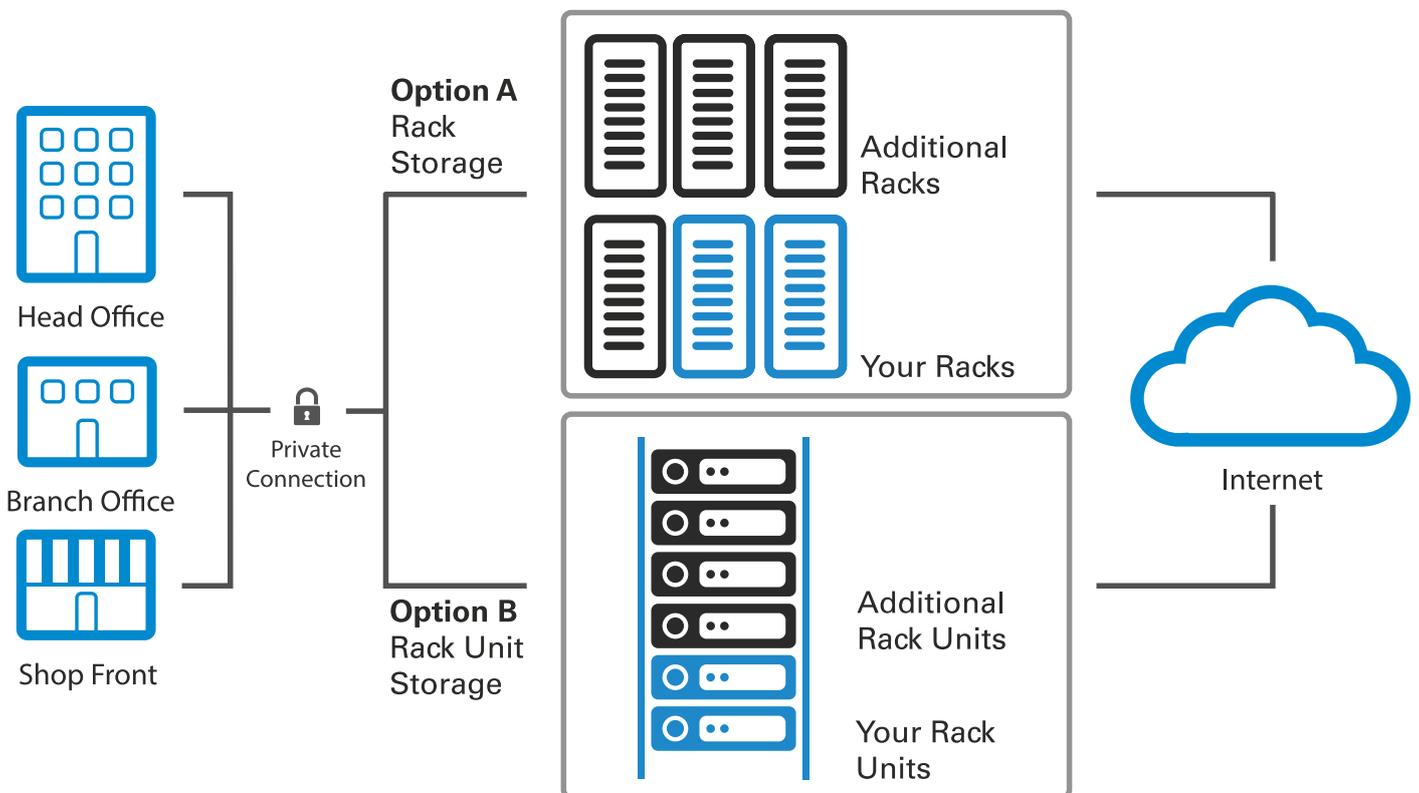

Colocation allows you to house appliances, servers, and specialist network equipment in Over the Wire's owned and operated data centres.

Space is available in a variety of allocation sizes, ranging from a single rack unit to multiple full racks. Varying power configurations are available to suit your requirements.

Management services are available, which are designed to reduce the time you spend in the facility, include tape changes, remote hands, and console server access.

KEY FEATURES

- Secure, managed environment for your infrastructure
- Combine with private connections for complete data security
- Choice of facilities around the country
- Access to major Australian carriers

OUR COMPANY

Who are we? A straight talking, no-nonsense company that gets things done quickly and without fuss. We're outcomes-focused. We work to understand exactly what you need, then build a solution that works for you, rather than retro-fitting your needs to our offerings.

If you're tired of empty promises and poor service, and you'd prefer to deal with a more agile and responsive company - who's ready to listen and to give you what you actually need, then it might be time to go Over the Wire.

ORDERING AND QUOTES

Availability of rack space in each data centre varies from time to time. Our sales team will advise you on which rack options, power densities, and connectivity are available in each of your desired locations.

Once an order is placed our provisioning team will arrange site inductions, electrical work, and connectivity to your racks.

SERVICE OVERVIEW

Decrease Your Downtime

By migrating your physical infrastructure to Over the Wire's fully managed facilities you can take advantage of our 99.95% uptime, preventing costly disruptions to your business-critical infrastructure.

Remote Hands

Qualified Over the Wire engineers are on hand to make adjustments to your infrastructure should you need it. Whether it is a one off need like installing a new server, or a recurrent one, such as regular tape changes, our highly experienced staff have the capabilities to deal with it for you.

24/7 Support

Over the Wire's network operations team is available 24/7 throughout the year to resolve outages or other emergencies.

DATA CENTRE SPECIFICATIONS

Our flagship Brisbane facility is built to the following specifications with most of our other facilities conforming to a similar standard.

Cooling

An APC hot-aisle containment system, combined with an n+1 cooling unit redundancy, maintains the perfect environment for your infrastructure, mitigating the chance of system failure due to overheating, humidity shifts, or temperature shocks.

Power Supply

Power is supplied using redundant A+B feeds with an uninterruptable power supply (UPS). In the event of an interruption the site remains powered by backup batteries until the onsite generator is started.

Security

Our datacentre sites are secured with access card control and monitored by CCTV. Every entrance to the facility is logged by time and camera image.

Accessibility

Both Full Rack and Half Rack customers receive 24/7 secure access via smartcard.

Per Rack Unit customers will receive escorted access during staffed hours.
