

INFRASTRUCTURE AS A SERVICE IAAS

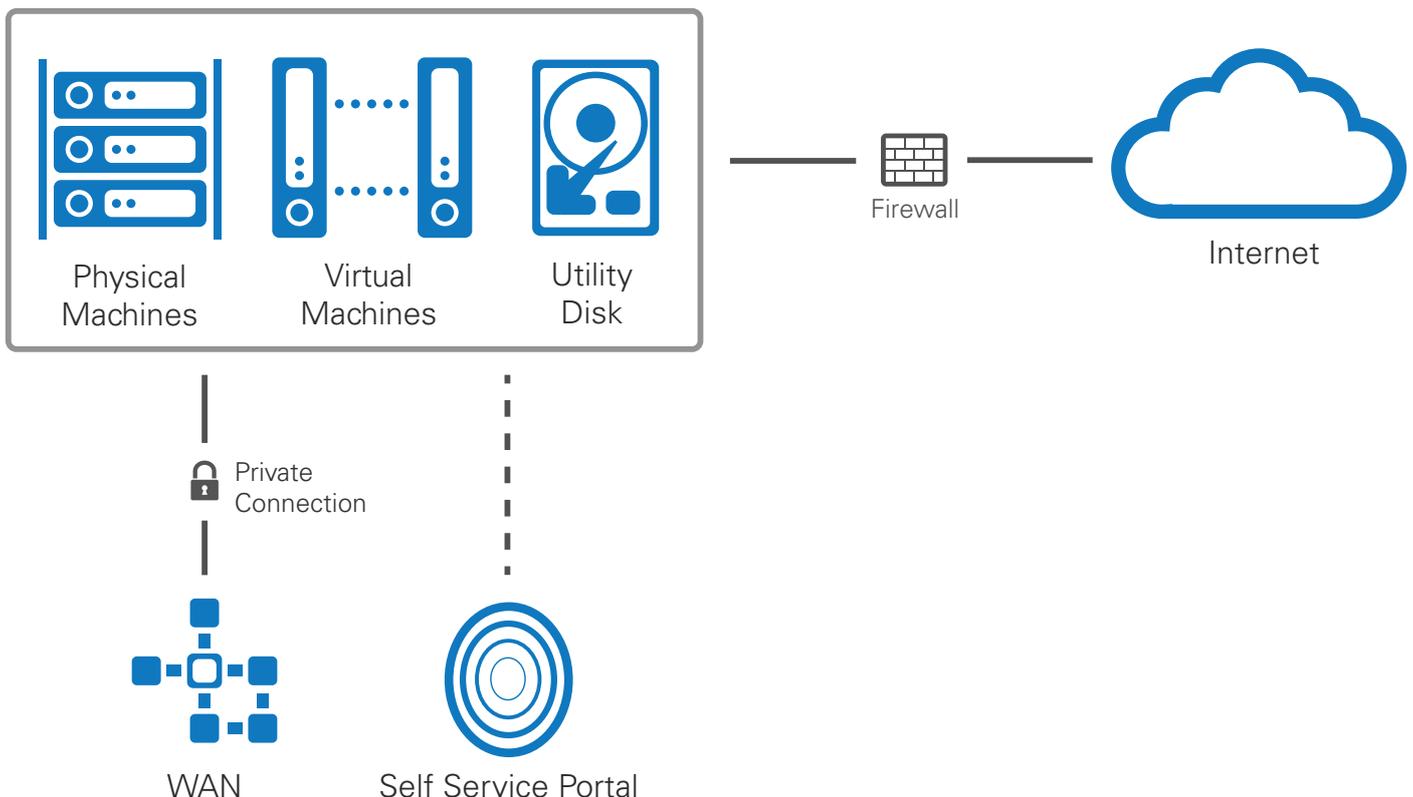

OvertheWire provides a range of IaaS platforms, allowing you to minimise capital expenditure whilst maintaining the flexibility to cater to your unique requirements.

Infrastructure as a Service provides the base components of a fully outsourced infrastructure solution. Sold standalone as a utility, or combined with design, migration, and maintenance services.

Rather than buying servers, network equipment, and data centre space, you can combine our ready to use components to build your ideal solution.

KEY FEATURES

- Service scalability
- Combine with a private connection for complete data security
- Self Service Portal for ease of management
- Cisco UCS
- EMC² storage

OUR COMPANY

Who are we? A straight talking, no-nonsense company that gets things done quickly and without fuss. We're outcomes-focused. We work to understand exactly what you need, then build a solution that works for you, rather than retro-fitting your needs to our offerings.

If you're tired of empty promises and poor service, and you'd prefer to deal with a more agile and responsive company - who's ready to listen and to give you what you actually need, then it might be time to go Over the Wire.

ORDERING AND QUOTES

As a no-nonsense company, and as leading telecommunications experts, we understand the importance of getting things done as easily as possible. Just give our friendly sales staff a call and we will take care of the rest.

Once your IaaS agreement is in place, ordering resources is as simple as a few clicks.

SERVICE OVERVIEW

Physical

Some workloads are better suited to running on dedicated hardware rather than VMs. Over the Wire's managed servers are based on handpicked hardware with around-the-clock monitoring. Every server comes standard with virtual console access and remote reboot.

Virtual

Over the Wire provides virtual machines (VMs) on a utility basis: we charge for disk, memory and CPU usage per month. We can give you access to the management portal to build and maintain your own VMs, or we can build them for you.

VMs are protected against host, network, and SAN failure with automatic failover and redundancy built into the underlying host clusters and their supporting equipment.

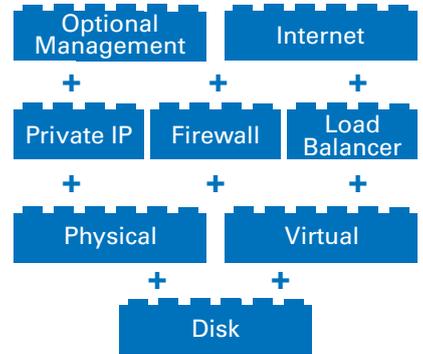

Disk

Over the Wire offers highly available storage services to its customers on our SANs. Utilising our infrastructure will afford you the security, redundancy, high performance, and availability of a SAN system, without the prohibitively expensive setup costs, power demands, and spatial requirements. You can combine disk with either your own servers or ours.

Managed network and firewall

We provide a number of networking solutions, from a direct Internet connection to a complex configuration of load balancers, firewalls, and data networks, to ensure the security and high availability that our customers require.
